

# PortaPoint™

## Portable Guard Booth and Access Control

**Rapid solution to managing entry and exit points.**

The PortaPoint™ Portable Guard Booth and Access Control System is a mobile solution to managing entry and exit points. The transportable unit is extremely easy to employ and ideal for short-term events. The components remain compact and transportable while providing all the security benefits of a traditional guard booth and access control system, but at a lower cost.

The PortaPoint™ is an exceptionally versatile and portable access control system. The top portion of the PortaPoint™ collapses onto the bottom for convenient shipping capabilities. The system is designed to incorporate additional security equipment, control systems, and surveillance cameras to create a complete access control system. The PortaPoint™ measures 8ft x 6ft x 8ft and sets on a steel trailer but is light-weight enough to be easily towed behind a class 3 vehicle, such as a GMC 4500 and Ford F350.

PortaPoint™ is completely customizable based on intended applications. The guard booth can be equipped with heating and/or air, alternate power options (110V/220V, gas or diesel generator), bullet resistant doors/walls/windows, mast-mounted PTZ cameras for long range surveillance, traffic barriers, security lights, hydraulic trailer leveling jacks and custom applied graphics.
