

Cruising the Streets

Road-based entry & exit LPR system

The FastPlate Express License Plate Recognition System from **Advanced Detection Technology** is a cost effective solution to maintaining an accurate record of incoming and outgoing visitors and their vehicles at any location. The System is a portable or fixed unit that captures license plate images of moving vehicles as they enter and exit a designated

area. Equipped with front and rear LPR cameras, the system provides an effective method of monitoring, documenting, storing and reporting on vehicle information including date, time and location of entry/exit. Options include linking to a "Be On Lookout" (BOLO) database, "Do Not Enter" list, and real-time cell and e-mail alerts.
