

# FastPlate™

## License Plate Recognition

*Advanced Detection Technology's FastPlate™ License Plate Recognition System captures and processes — manually or automatically — license plate information.*

- >> Identifies vehicles by “reading” license plate images using optical character recognition software
- >> Quickly helps security personnel screen, profile, and determine access or denial of entering vehicles using on-screen alerts
- >> Exclusive entry into a secure site for authorized members only
- >> Captures, stores, and manages an image of the vehicle’s license plate, driver and passenger information, and a video recording of the activities
- >> Automatic access gate control abilities
- >> Available in a variety of languages
- >> Immediately synchronized and validated by any pre-defined database including stolen vehicles, restricted access list, un-paid fines, outstanding warrants, or amber/silver alerts

## FastPlate™ Fixed

- >> Mounted, permanent license plate recognition system
- >> Configured for inbound lanes only or both inbound/outbound lanes
- >> Operable both day and night using infrared LED cameras
- >> Compatible with all FastGate™ Access Control components

## FastPlate™ Mobile

- >> Ideal for Law Enforcement
- >> Captures license plates traveling up to 110 mph (177 km/h) in 4 lanes of traffic

- >> On-screen alerts for any pre-defined list including stolen vehicles, unpaid fines, outstanding warrants, or amber/silver alerts
- >> Shock resistant, mounted and/or mobile cameras
- >> Increased efficiency – More than doubles officers effectiveness !

## FastPlate™ HandHeld

- >> HandHeld puts security in the palm of your hand !
- >> Actively engage in the access control process
- >> Information presented on-screen, with user-friendly images and alerts in milliseconds
- >> Integrated, handheld, digital camera, captures image of driver, passengers, and license plate
- >> Also includes magnetic strip reader, signature pad
