

FastGate™ HandHeld

Portable Access Control

Security in the palm of your hand!

The revolutionary FastGate™ HandHeld actively engages security personnel in the access control and tracking process while giving management the ability to analyze daily activities. The system is designed to efficiently link individuals, their vehicles, as well as their personnel ID cards in an easy-to-use handheld device. The FastGate™ HandHeld encompasses a wide variety of technologies including a digital camera, signature pad, Automatic License Plate Recognition (ALPR), and magnetic stripe, 2D/3D barcode, and/or RFID.

Information captured by FastGate™ HandHeld is immediately synchronized and validated with selected database* to present security officers with on-screen images and/or alerts in seconds. Automated alerts can be transferred to a central command station or wirelessly transmitted to a cell phone/PDA device.

The FastGate™ HandHeld give security personnel the ability to run searches for specific images and customized reports to confirm actions or analyze patterns. The system allows for a broad range of detailed reporting capabilities on any information fields captured during the access process and includes time/date stamped referencing.

*some databases accessible by government/police agencies only.

- >> LPR software, signature pad, magnetic stripe, 2D/3D barcode, and/or RFID

- >> Digital camera captures image of driver, passengers, license plate, vehicle, cargo
