

# LowCam™ VI104

## Fixed, In-Ground Under Vehicle Inspection

*Great for areas that experience harsh weather.*

The LowCam™ VI104 Under Vehicle Inspection System is a permanent, fixed, in-road, under vehicle inspection system. The system lies flush to the road and utilizes a state-of-the-art, air knife debris removal system that removes moisture and unwanted litter to assure a clear view in adverse weather conditions such as heavy rainfall, strong winds and dusty environments.

The LowCam™ VI104 offers a slim, in-ground design without forfeiting quality, detailed images of the entire vehicle's undercarriage. Using high-intensity LEDs, on-screen images can be captured and recorded in low or no-light settings and in all weather conditions. The system is equipped with eight day/night cameras, four optimized for both high and low vehicles. The LowCam™ VI104 produces clear, detailed, on-screen images that aid in the detection of foreign objects or vehicle modifications.

Unlike the competition, the LowCam™ VI104 under vehicle inspection is a full PC-based system that operates using Advanced Detection Technology's own LowCam™ software. The software provides quad or linear images displayed on a 17inch computer monitor for quick and easy inspections. Security personnel can review, scan, and zoom in on areas of interest using a standard touch pad. Inspections are conducted in a remote, stand-off location therefore dramatically increasing the safety of personnel.

- >> **Fixed, In-Ground UVIS**
- >> **Air-Debris Removal System**
- >> **Inspect Vehicles up to 10mph**

- >> **Remote, Stand-off Inspections**
- >> **Day/Night Operation**
- >> **Fast, Reliable Inspections**
