

SunVeillance™

Solar Video Surveillance

Let the sun provide you with peace of mind!

SunVeillance™ Solar Security monitors your home, business, or remote assets while you are away, all while conserving energy. A complete, solar powered, four channel security system, SunVeillance™ consists of weather-proof surveillance cameras, video controller, solar panels, solar-charged battery, and a DVR that allows digital video capture and playback. Built-in flexibility allows for real-time video to be viewed from any location via the Internet.

SunVeillance™ can be configured as a portable system, using a pole or tripod mount, for convenient relocation. The system can also be installed as a fixed solution, using a mast, pole, building or roof mount for the protection of permanent assets. Recording modes can be configured for continuous recording, daytime scheduled recording, or for intelligent video applications such as sensor activation or motion detection recording.

SunVeillance™ has been designed to provide users with a durable, environmentally-friendly security solution that is cost-effective to own and operate. The resource-efficient SunVeillance™ Solar has been crafted to exceed "green" standards and provide clients with years of healthy, quality surveillance while lowering energy consumption and ultimately saving money.
